Sequence 8561, Application US/09949016
PATENT NO. 6812339
GENERAL INFORMATION:
APPLICANT: VENTER, J. Craig et al.
TITLE OF INVENTION: POLYMORPHISMS IN KNOWN GENES ASSOCIATED
TITLE OF INVENTION: WITH HUMAN DISEASE, METHODS OF DETECTION AND
FILE REFERENCE: CL001307
CURRENT APPLICATION NUMBER: US/09/949,016
CURRENT FILING DATE: 2000-04-14
PRIOR APPLICATION NUMBER: 60/241,755
PRIOR FILING DATE: 2000-10-20
PRIOR APPLICATION NUMBER: 60/237,768

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             US-09-583-447A-8
                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Patent No. 6703491

GENERAL INFORMATION:
APPLICANT: Homburger et al.

APPLICANT: Homburger et al.

TITLE OF INVENTION: Nucleic acids and proteins of Drosophila melanogaster

TITLE OF INVENTION NUMBER: US/09/270,767

CURRENT APPLICATION NUMBER: US/09/270,767

CURRENT FILING DATE: 1999-03-17

NUMBER OF SEQ ID NOS: 62517

SOFTWARE: Patentin Ver. 2.0

SEQ ID NO 46468

LENGTH: 529

TYPE: PRT
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          NUMBER OF SEQ ID NOS: 45

IFUNCTION: Cytochromes P450 are a group of heme-thiolate monoxygenases. In liver microsomes, this enzyme is involved NADPH-dependent electron transport pathway. It oxidizes a va of structurally unrelated compounds, including steroids, fat acids, and xemobiotics.

CATALYTIC ACTIVITY: RH + reduced flavoprotein + O(2) = ROH + Oxidized flavoprotein + H(2)O.

INDUCTION: P450 can be induced to high levels in liver and compounds. The statement of the property of the process of the property of the property of the process of the property o

                                                                                                                                                                                                                                                                                                                                                                                                                                                  Wang H., Kawashima H., Strobel H.W.;
"cDNA cloning of a novel CYP3A from rat brain.";
Biochem. Biophys. Res. Commun. 221:157-162(1996).
-I- FUNCTION: This isozyme seems to be implicated in olfaction. A in the demethylation of erythromycin as well as benzphetamine
-I- CATALYTIC ACTIVITY: RH + reduced flavoprotein + O(2) = ROH + oxidized flavoprotein + H(2)O.
-I- SUBCELIQUAR LOCATION: Membrane-bound. Endoplasmic reticulum.
-I- TISSUE SPECIFICITY: Mainly expressed in olfactory epithelium.
                                                                                                                                                                                                               This SWISS-PROT entry is copyright. Obtaining a representation of the 3-D structure of cytochrome P450 3A4 crystals, by providing data of structure factors used to generate electron density map of crystal structure and constructing electron density map of obtained data.

The invention relates to a novel method for obtaining a representation of the 3-dimensional structure of a crystal of cytochrome P450 (CYP)3A4 which involves providing the data of structural factors and phases used

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       to generate an electron density map of 3A4 crystal structures as given in specification and constructing an electron density map of the structural factors and phases. The method of the invention has cytostatic applications and may be useful for obtaining a representation of the 3-dimensional structure of a crystal of CYB3A4, where the crystal structure is useful in modelling the interaction of a compound with the protein and in drug design. Such information may be utilised on order to generate a composition to treat cancer. The current sequence is that of the human CYB3A4 N-terminal truncated protein of the invention which has a synthetic N-terminal region in place of the hydrophobic transmembrane domain in order to aid Escherichia coli expression and solubility, in addition to a C-terminal His tag which facilitates purification.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Sequence

                                                                                         The invention relates to a method of purifying a cytochrome P450 by expressing in a host cell culture a cytochrome P450 molecule, recovering the cells from the culture and suspending the cells in a salt buffer having a conductivity of 12-110 mS/cm, lysing the cells and removing cell debris to provide a high-salt lysate, adding to the lysate a detergent to provide a high-salt-detergent lysate, and recovering the P450 from the lysate. Methods of preparing and purifying cytochrome P450 proceins are useful for X-ray crystallographic studies and crystallographic screening of small molecules bound to P450, or for NMR studies and high-throughput screening methods to discover drugs or analyze the interaction of drugs with P450 molecules. This sequence corresponds to the human cytochrome P450 3A4.
                                                                                                                                                                                                                                                                                                                                                                                                                  WPI; 200
N-PSDB;
                                                                                                                                                                                                                                                                                                                               Purifying a cytochrome P450, for NWR studies and high-throughput screening methods to discover drugs, comprises suspending cells expressing P450 molecule in a salt buffer, lysing the cells and a high-salt-detergent lysate.
                                                                Sequence 485

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Ś
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      당
                                                      This invention relates to a transgenic non-human animal which may be used CC for assessing the behaviour and/or metabolism of a drug in another animal CC and which expresses a foreign polypeptide associated with drug behaviour and/or metabolism. The invention also comprises a nucleic acid construct CC for use in producing the above transgenic non-human animal and a method of assessing the metabolism and/or behavior of a drug in an animal of interest, comprising administering a test agent to the transgenic animal and conducting analytical tests to determine drug metabolism and/or behaviour. The transgenic animal is useful in studying drug metabolism and/or behaviour in other animals. The nucleic acid construct is useful in producing the above transgenic animal and the methods are used for producing, breeding and using transgenic animals for pharmacological (e.g. pharmacokinetic or pharmacodynamic assays) and/or toxicological studies. Nucleic acid sequences used within the invention are serum albumin, alpha-acidic glycoprotein; cytochrome p450 (CYP); uridine CC diphosphoglucuronosyl transferase (UCT); multidrug resistance proteins and (MRP's). The present sequence represents a protein sequence used to create a transgenic animal within the scope of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            New transgenic non-human animal expressing a foreign polypeptide associated with drug behavior and/or metabolism, useful for studying the behavior and/or metabolism of a drug in other animals.
